

HEALTH SCIENCES, B.A.

The Health Sciences major is intended for the student who has an interest in health care, but has not fulfilled the requirements for a specific program within the school. The Health Sciences degree is not intended as a primary major of study, but can be used as a foundation of study when circumstances have prevented successful completion of the student's initial health care education choices.

Students with a departmental major within the health sciences are ineligible for this option. A student interested in the Health Science major must apply for an upper-division Health Sciences major through the school dean. There is no Health Sciences minor.
